

STRUCTURED NOTES

CAPTURE • ORGANIZE • UNDERSTAND • APPLY

Name Gandhi Ernesto V.C
Course / Subject Programacion
Speaker / Class Carlos Richardo
Date & Time 9-10-2026

KEYWORDS & KEY CONCEPTS

- Código de referencia
- leer n
- Leer A[0..n-1]
- for i = 0 to n-2
- For j = 0 to n-i-2
- if A[j] > A[j+1]
- inter cambio (A[j], A[j+1])

Focus on the key concepts that generate value and understanding.

ACTIONS / NEXT STEPS

- ☐
- ☐
- ☐
- ☐
- ☐

Turn knowledge into action. Small steps, big results.

NOTES

Title: Diagrama de flujo bubblesort
Topic: Creacion de este mismo

QUESTIONS & REFLECTIONS

What questions do I have?

What is unclear or confusing?

What ideas connect?

How can I apply this?

What assumptions should I challenge?

SUMMARY

Write a brief summary of the main points.

$n = \text{numero de elementos}$

KEY TAKEAWAY

Capture the most important insight.

KEEP LEARNING
KEEP GROWING
CREATE IMPACT

Carlos Richardo Viñue

-
-
-
-

Focus on the key concepts that generate value and understanding.

ACTIONS / NEXT STEPS

- ☐
- ☐
- ☐
- ☐
- ☐

Turn knowledge into action.
Small steps, big results.

NOTES

Title: matematicas para computadores
Topic: sistema binario

En el sistema binario solo hay dos cifras: 0 y 1. Como sucede en el sistema decimal, en este sistema binario también se utilizan exponentes para expresar cantidades. Mientras que en el sistema decimal la base es 10, en el sistema binario la base es 2.

Como se mencionó anterior, la representación exponencial se utiliza para convertir una cantidad de un sistema numérico cualquiera al sistema decimal. A continuación se muestra la forma de hacer esto.

QUESTIONS & REFLECTIONS

descodificación de 1011 = $1(2^3) + 0(2^2) + 1(2^1) + 1(2^0)$
 $8 + 0 + 2 + 1 = 11$

What questions do I have?

What is unclear or confusing?

What ideas connect?

How can I apply this?

What assumptions should I challenge?

SUMMARY

Write a brief summary of the main points.

El sistema binario es el sistema básico en computadores.

KEY TAKEAWAY

Capture the most important insight.

Carlos Pichardo Vinque

- ☐
- ☐
- ☐
- ☐

Turn knowledge into action. Small steps, big results.

NOTES

Title: matematicas para Computadores
Topic: Sistema hexadecimal

La base numerica del Sistema hexadecimal es 16 y para representar cantidades en el se utilizan los diez digitos del Sistema decimal (0, 1, 2, 3, 4, 5, 6, 7, 8, 9) así como las seis primeras letras del alfabeto (A, B, C, D, E, F).

Con esto se pueden formarse numeros segun el principio de valor posicional como en los demas sistemas metricos.

Ejemplo	binario
hexa	
0	0000
1	0001
2	0010
3	0011

QUESTIONS & REFLECTIONS

Variaciones de simbolos?
Cambio de hexadecimal a binario

What questions do I have?

What is unclear or confusing?

What ideas connect?

How can I apply this?

What assumptions should I challenge?

SUMMARY

Write a brief summary of the main points.

Sistema que usa 6 simbolos

KEY TAKEAWAY

Capture the most important insight.
